

GABRIEL MEDNICK, PHD

Biochemist, bioinformatician and data scientist

My journey into the physical and biological sciences started with a desire to study osteopathic medicine. In the process of completing a biochemistry and molecular biology degree, my interest in the structure and function of the human body grew into a fascination with the invisible structure and inner workings of the cell. I developed a deep interest in both physical chemistry and biochemistry, and my curiosity resulted in a PhD focused on sensory transduction pathways and light sensing mechanisms in bacteria.

After finishing my PhD, I developed and implemented innovative teaching practices in chemistry and biology at the university level. More recently, I worked as a senior scientist for a small biotech startup where I continued to grow as a research scientist and also developed an engineering outlook on research applications.

Over the last few years, I have been intentionally building my skills as a data scientist. I started out with an interest in biological data analysis but have a more general machine learning focused approach to working with any type of data. My mission is to facilitate data informed choices that provide insight, drive innovation and optimize decision making.
